

What Are Our Options?

These are our ideas to replace the existing bridge.....

- Build a new bridge as far west as Marthasville on new Route 47 alignment following Route 100.
- Build a new bridge on new Route 47 alignment as far east crossing into St. Charles County following Route 100.
- Build a new bridge adjacent to the existing bridge.
- Build a new bridge adjacent to the existing bridge, but replacing the existing bridge's truss with steel girders, so it can continue to be used.

These are our ideas to improve the reliability of Route 47 north of the river during flooding by adding lanes from the new bridge across the floodplain...

- New lanes built from either bypass option would likely connect to Route 94.
- New lanes from an adjacent bridge could either parallel the existing Route 47 alignment, or could extend south of the airport to Route 94.

What are YOUR ideas?
